

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date 02 October 2026

Team ID _____

Project Name Implement Client Script & UI Policy (Incident)

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Form Validation	• Validate required incident information before submission. • Display an alert or field message when input is incomplete or invalid.
FR-2	Dynamic Field Behaviour	• Make fields mandatory based on incident conditions. • Show or hide fields according to category, priority or state. • Make fields read-only when defined conditions are met.
FR-3	Client-side Field Handling	• Auto-populate related values where appropriate. • Clear irrelevant values when a controlling selection changes. • React immediately to field changes using Client Scripts.
FR-4	User Guidance	• Display contextual field messages for important inputs. • Reduce unnecessary manual checks by dynamically adjusting the Incident form.

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Incident form should be clear and easy to use. Only relevant fields should be shown, with contextual guidance where required.
NFR-2	Security	Client-side behaviour must not replace server-side security. Access and data protection must continue to follow ServiceNow roles, ACLs and platform controls.
NFR-3	Reliability	Client Scripts and UI Policies should behave consistently for the defined incident conditions without conflicting rules or incorrect field states.
NFR-4	Performance	Client-side logic should execute quickly and avoid unnecessary or duplicate scripts that could slow the Incident form.
NFR-5	Availability	Configured Incident form behaviour should be available whenever authorized users access the ServiceNow Incident module.
NFR-6	Scalability	Additional incident conditions, field rules and validations should be addable without redesigning the complete form logic.
