

Project Design Phase-III

Proposed Solution Template

Date 04 October 2026

Team ID _____

Project Name Implement Client Script & UI Policy (Incident)

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	ServiceNow users and support agents may enter incomplete or incorrect incident information because the Incident form does not always provide dynamic validation, guidance, or field control based on the current incident conditions. This can cause confusion, additional manual checking, and inconsistent incident data.
2.	Idea / Solution description	Implement ServiceNow Client Scripts and UI Policies on the Incident form. Client Scripts will provide client-side validation, alerts, messages and field-value handling. UI Policies will dynamically control whether fields are mandatory, visible or read-only according to defined incident conditions.
3.	Novelty / Uniqueness	The solution combines real-time form validation with condition-based user-interface behaviour. Instead of relying on users to remember every data-entry rule, the Incident form responds dynamically to their selections and guides them while they work.
4.	Social Impact / Customer Satisfaction	Support agents receive a clearer and more consistent form experience, reducing avoidable data-entry errors and unnecessary manual checks. Better-quality incident information can also help support teams process incidents more efficiently and provide a more consistent service experience.
5.	Business Model (Revenue Model)	This is an internal ServiceNow process-improvement solution rather than a standalone revenue-generating product. Its business value comes from reducing rework, improving incident-data quality, increasing support-agent efficiency and making better use of the organization's existing ServiceNow platform.
6.	Scalability of the Solution	The solution can be extended by adding new Client Scripts, UI Policies, conditions and validations as incident-management requirements evolve. The same approach can also be adapted to other ServiceNow forms and processes without redesigning the complete solution.
